FLAG—SIGN—SAFETY—& LANDSCAPE SOLAR LED LIGHTS

Our all-weather, eco-friendly, Solar LED Stake Lights ([shown 2ND photograph from left](#)) is perfect for any outdoor or indoor applications. This heavy-duty solar light has (8) super bright white LED lights and a metalized reflective background that illuminates your product or area for up to (20) feet or more. This figure depends upon the amount of ambient light (other light sources) in the area, this affects the quantity of light, total area covered and distance from the source to be illuminated. This solar light is specifically designed to illuminate Feather, Tear drop & Blade style flags (up to 18' or more from ground level), signs, landscaping areas including trees as a property deterrent, & for use in your vehicle, truck, or boat as an extremely bright & useful hands-free safety light. The solar panel and the light are totally adjustable to any position. The light comes with the convenient 2-section pole & ground stake that can also be used in the ground or as a hand held light source. The Solar Panel and the light are totally adjustable to any position. The heavy duty-plastic body is 2³/₈" high X 6" deep X 4³/₄" wide. Each stake pole is 1¹/₄" wide by 7" high. The solar panel is 4" high X 5¹/₂" wide. The solar light automatically powers on at dusk and off at dawn. The light comes with a convenient on/off switch (that does not have to be in the on position in order to recharge the batteries), (3) replaceable AA size nickel-metal hydride batteries (included in each unit) that last an average of 600 to 800 nights, and can easily be obtained at your local hardware store. The rechargeable batteries are recharged by the solar panel at the top of the unit and this is what operates the unit. All solar panels requires at least (5) hours per day of direct sunlight to recharge the batteries to insure the greatest amount of nightly hours used. The rechargeable batteries are recharged by the solar panel at the top of the unit, which is the source of operation for the unit. Below are some actual before and after photographs using one Stake Light only (with no Photo Shop color, light, or contrast enhancements except for straightening out the images), and with ambient light coming in from high pressure sodium street lights in the area. Remember that the less ambient light in the area, the greater opportunity you'll have in obtaining the greatest amount of light hitting the product or area to be illuminated.

FOB—Arizona—If available, we can use your UPS or Fed-Ex account number for all shipments.

Warranty—One year against manufacturer defects—No warranty on batteries.

Master Carton Packaging—(12) units per Master Carton (Each unit box is UPC coded).

Minimum Order Handling Charge—Less than Master Carton orders will incur a \$3.00 handling fee.
